

Short Manual
of
Volcanix® Humic Protect Factor
Effective feeding and innovative protection
Feeds plants and the soil.

Volcanix® Humic Protect Factor helps significantly maintain plants in good condition and health thanks to:

- Humi active complex – humic complex chelating macro and microelements found in the fertilizer and providing structure-forming carbon for plants.
- LS active complex – chelating complex and adjuvant reducing the surface tension in the fertilizer, thanks to which the fertilizer is more effectively used by plants
- Biostym active complex – is a complex that biologically stimulates plants to grow, limiting the impact of stress on plants and regenerating plants after stressful conditions, the complex consists: natural amino acids, substances and enzymes that stimulate growth, colloidal silica.

HOW TO USE:

The optimal conditions for foliar nutrition are: high humidity and temperature within 10-30°C. On sunny days, spraying should be done early in the morning or late in the evening. Spraying performed at a temperature higher than 30°C and low humidity, causes salt crystallization on the leaves and fruits, which significantly reduces the effectiveness of spraying.

HOW MUCH DO YOU NEED?

First treatment (2l-5l / 1ha) – at start of the season it builds a strong plant root system and plant resistance to stress conditions.

Second treatment (2l-5l / 1ha) – beginning of vegetation it enhances the generative development of plants, what affects final quantity and quality of harvested crops

250 l of water+5 l of VOLCANIX® HUMIC PROTECT FACTOR = 255 LITERS /1ha
*orchards

500 l of water+10 l of VOLCANIX® HUMIC PROTECT FACTOR = 510 LITERS /1ha

In the desert areas we recommend to applicate 4 times per season.

COMPOSITION:

N-4,5%, P-5%, K-0,5%, Mg-2%, S-6%, Cu-0,7%, Zn-0,8%, Mn-5%, B-0,3%, Si-0,2%

- 50% organic substances
- Natural amino acids
- Substances and enzymes that stimulate growth
- Colloidal silica

STORAGE:

VOLCANIX® HUMIC PROTECT FACTOR should be stored in an origin package, at a temperature not lower than 5°C and not higher than 40°C in a place inaccessible to children. Protect from the sun. Not to be combined with plant protection products, mineral fertilizers and other chemical synthesis products.

Packing:

- 1-litre bottles
- 5-litre bottles
- 1000-litre tank
