

Short manual of ***Fulvic Pro***

Fulvic Pro is a pure mineral source of potassium fulvate powder.

We select high-quality young leonardite and use the international advanced MRT (molecular recombination technology) to obtain a high content of mineral source fulvic acid and potassium. It has the highest water solubility, extremely fast dissolution within 10 seconds. This product contains very active functional groups and has strong ion exchange capacity. It can be compounded within the range of pH value 2-12. Also, it does not produce any precipitation in the case of hard water of 30 and can counter hard water.

COMPOSITION:

- Mineral Fulvic Acid (Dry Basis):60%
- K₂O (Dry Basis):13%
- Dry Matter:90%
- Powder

APPLICATION:

Drip irrigation and flushing: 5kg-8kg per hectare at the seedling stage, 8kg-15kg per hectare at the growth and fruit swelling stage.

Foliar spraying: 3kg-5kg per hectare, diluted 3000-5000 times.

BENEFITS:

Fulvic Pro counter hard water and flocculation.

Potassium fulvic acid can activate and compact the soil, help with the physiological metabolism of crops and root development also it makes stems and leaves lush.

This product improves soil water and fertilizer retention capacity, adjusts pH value, reduces the content of heavy metals in soil and the harm of salt ions to seeds and seedlings.

Potassium fulvic acid can be used for basal and flushing application, which can make crops mature earlier and increase yield.

Nitrogen fixation, phosphorus solubilization and potassium activation. The synergistic effect on potassium fertilizer is particularly apparent, it can increase roots and seedlings, resist heavy cropping and diseases, also improve crop quality.
