

Short Manual of ***Humic Root Care***

Humic Root Care is a kind of functional liquid fertilizer with synergistic effect of organic and inorganic nutrients.

It adopts the unique MRT molecular recombination technology to obtain small molecular organic matter and perfectly integrates with nitrogen phosphorus, potassium and other nutrients to meet the needs of different nutrients in different growth stages of crops. It also has a functions of high resistance to hard water, activating soil, strong rooting, stress resistance and promoting growth and improving quality.

COMPOSITION:

- Humic Acid 100g/l
- Seaweed extract 150g/l
- N - 100g/l
- P2O5 - 50g/l
- K2O - 55g/l
- Zn - 5g/l
- B - 5g/l

APPLICATION:

Fertilization methods such as flushing, drip irrigation, spray irrigation and root irrigation can be used once every 7-10 days. The recommended dosage is 50-100 liters/ha. When using drip irrigation the dosage should be reduced as appropriate. When using root irrigation the minimum dilution ratio should not be less than 300 times.

BENEFITS:

Strong Rooting - use MRT molecular recombination technology to obtain small molecules of humic acid, alginate, vitamins etc to stimulate the growth of crop root tips. Increase white roots and root fibers. Enhance rhizosphere microbial activity and secrete more root promoting substances.

Activated Soil - high content of uric acid and other high activity biostimulants can effectively promote the formation of soil aggregate structure, increase soil porosity, facilitate the root growth and beneficial microbial reproduction. Reduce the occurrence of soil borne diseases.

Stress resistance and growth promotion - effectively improve the ability of cold resistance, drought resistance, salt and alkali resistance of crops. At the same time inorganic nutrition combined with high content of nitrogen, phosphorus, potassium, zinc and boron can meet the needs of crop growth.

Packaging:

- 1-liter bottle
- 5-liters bottle
- 20-liters bottle
- 1000-liters tank
